EDUCATION

University of Waterloo <i>Bachelor of Computer Science (Honours, Co-op)</i> President's Scholarship of Distinction; Trudy Byma Scholarship; Schulich Leader Nominee	Waterloo, ON <i>Expected 2031</i>
White Oaks Secondary School <i>High School Diploma, 98.8% average</i>	Oakville, ON <i>2026</i>

EXPERIENCE

Co-Founder & Chief Technology Officer <i>Factful — AI EdTech Startup</i> - Built the Factful web app using TypeScript, React, and Tailwind CSS so that students could paste in an essay and see which of its claims were backed by credible sources and which were not. - Built a retrieval-augmented generation (RAG) pipeline in Python with Azure OpenAI LLMs and live source lookup so that each claim in a student's essay was checked against real, cited sources rather than the model's memory. - Deployed and scaled the platform on Microsoft Azure with Node.js and SQL so that it stayed fast and online for 71K weekly visitors, including a pilot with Seneca College.	2022 – Present <i>Oakville, ON</i>
Software Engineer <i>Jazzba — Intellistock Warehouse Management</i> - Took over Intellistock, a warehouse-management product stuck on outdated Angular, React, and Ionic, and modernized it onto current TypeScript and JavaScript so that its clients kept getting the updates they paid for. - Rewrote its backend services and API layer using Node.js, RESTful APIs, Docker, and Kubernetes so that inventory data came back 35% faster across thousands of SKUs a day.	2025 <i>Remote</i>

PROJECTS

Bricked — Hack the North 2026 Winner <i>Python, Claude, OpenAI, Next.js</i> - Engineered a text-to-LEGO AI harness in Python, using Claude LLMs to turn an idea into a buildable brief and OpenAI image generation to draw it from three angles, so that typing “a red tractor” gave a real LEGO model. - Built an iterative AI agent loop with a geometric kernel that rejected illegal brick placements and a vision critic that compared each build to the concept art, so that every model could be built from real LEGO pieces.	2026
WMOJ — Online Judge Platform <i>Python, C++, Docker, Linux, Redis</i> - Wrote a competitive-programming judge in Python and C++ that grades submissions inside Docker sandboxes on Linux so that students got a verdict within seconds and the school no longer paid for a costly outside vendor. - Separated submission intake from grading using an asynchronous Redis queue and RESTful APIs so that 200+ students using it at once during the White Oaks Triple Olympiad were graded without freezing the site.	2025
WatWiki — AI Lecture Notes <i>Electron, TypeScript, SQLite, GitHub, Claude Code, Codex</i> - Built an Electron and TypeScript app that records lectures and runs AI agents on each user's own Claude Code or Codex plan so that raw transcripts became linked notes, with deadlines pulled out automatically. - Stored notes in a local SQLite database synced to a shared Git and GitHub repository so that a group of friends kept one set of class notes and reminders up to date without sending files around.	2026
Weekloom <i>Next.js, React, TypeScript, PostgreSQL, Kubernetes</i> Built a to-do list laid out like a Gantt chart using Next.js, React, TypeScript, and PostgreSQL, deployed on Kubernetes, so that people could see a whole week of tasks on one screen and move them around like a spreadsheet.	2025 – Present

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C++, SQL, HTML, CSS **AI:** Claude, OpenAI, Azure OpenAI
Frameworks: React, Angular, Next.js, Node.js, Electron **Cloud:** Microsoft Azure, Docker, Kubernetes
Tools: Linux, PostgreSQL, SQLite, Redis, Git, GitHub

LEADERSHIP & AWARDS

VP & System Architect , White Oaks CS Club — mentored peers in competitive programming	2025 – 2026
Bronze Medal , Bay Area Science & Engineering Fair — atmospheric water generator prototype	2025
