| <b>University of Waterloo</b><br><i>Bachelor of Computer Science (Honours, Co-op)</i> <ul style="list-style-type: none"><li>President's Scholarship of Distinction; Trudy Byma Scholarship; Schulich Leader Nominee</li></ul> | Waterloo, ON<br><i>Expected 2031</i> |
| <b>White Oaks Secondary School</b><br><i>High School Diploma, 98.8% average</i>                                                                                                                                               | Oakville, ON<br><i>2026</i>          |

## EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |                                       |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------|
| <b>Co-Founder &amp; Chief Technology Officer</b><br><i>Factful — AI EdTech Startup</i> <ul style="list-style-type: none"><li>Built the Factful web app using TypeScript, JavaScript, HTML, CSS, and React so that students could paste in an essay and see which of its claims were backed by credible sources and which were not.</li><li>Built a retrieval-augmented generation (RAG) pipeline in Python with Azure OpenAI LLMs and live source lookup so that each claim in a student's essay was checked against real, cited sources rather than the model's memory.</li><li>Deployed and scaled the platform on Microsoft Azure with Node.js and SQL so that it stayed fast and online for 71K weekly visitors, including a pilot with Seneca College.</li></ul> | 2022 – Present<br><i>Oakville, ON</i> |
| <b>Software Engineer</b><br><i>Jazzba — Intellistock Warehouse Management</i> <ul style="list-style-type: none"><li>Took over Intellistock, a warehouse-management product stuck on outdated Angular, React, and Ionic, and modernized it onto current TypeScript and JavaScript so that its clients kept getting the updates they paid for.</li><li>Rewrote its backend services and API layer using Node.js, RESTful APIs, Docker, and Kubernetes so that inventory data came back 35% faster across thousands of SKUs a day.</li></ul>                                                                                                                                                                                                                             | 2025<br><i>Remote</i>                 |

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|
| <b>Engram — LLM Tutoring Runtime</b>   <i>Python, FastAPI, SQLite, Next.js, React, TypeScript, Electron</i> <ul style="list-style-type: none"><li>Catalogued 20 ways chat models fail as tutors, then designed and built an LLM tutoring runtime in Python and FastAPI so that the tutor was briefed each turn from what a learner had really proven, not a growing transcript.</li><li>Built the interface in Next.js, React, TypeScript, and Tailwind CSS and shipped it as an Electron desktop app with a live view of the runtime's own event log so that anyone could watch it decide what to teach next.</li><li>Stored learner evidence in SQLite (SQL) with local ONNX embeddings, and let only graders write to it, so that the tutor could not lie about progress; passed 16 of 18 eval scenarios versus 8 for plain chat.</li></ul> | 2026           |
| <b>Weekloom</b>   <i>Next.js, React, TypeScript, Tailwind CSS, PostgreSQL, Kubernetes</i> <ul style="list-style-type: none"><li>Built a to-do list laid out like a Gantt chart using Next.js, React, TypeScript, and Tailwind CSS so that people could see a whole week of tasks on one screen and move them around by keyboard, as they would in a spreadsheet.</li><li>Stored each user's plans in PostgreSQL with per-user access rules, deployed the app on Kubernetes, and set up CI/CD with Git and GitHub so that work was saved as people typed and updates reached users without downtime.</li></ul>                                                                                                                                                                                                                                  | 2025 – Present |
| <b>WMOJ — Online Judge Platform</b>   <i>Python, C++, Docker, Linux, Redis</i> <ul style="list-style-type: none"><li>Wrote a competitive-programming judge in Python and C++ that grades submissions inside Docker sandboxes on Linux so that students got a verdict within seconds and the school no longer paid for a costly outside vendor.</li><li>Separated submission intake from grading using an asynchronous Redis queue and RESTful APIs so that 200+ students using it at once during the White Oaks Triple Olympiad were graded without freezing the site.</li></ul>                                                                                                                                                                                                                                                               | 2025           |

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript, Python, C++, SQL, HTML, CSS   **Frameworks:** React, Angular, Next.js, Node.js  
**Cloud & Tools:** Azure, Azure OpenAI, Docker, Kubernetes, Linux, PostgreSQL, SQLite, Redis, Git, GitHub, CI/CD

## LEADERSHIP & AWARDS

|                                                                                                   |             |
|---------------------------------------------------------------------------------------------------|-------------|
| <b>VP &amp; System Architect</b> , White Oaks CS Club — mentored peers in competitive programming | 2025 – 2026 |
| <b>Student Strategy Advisor</b> , HDSB — secured a board grant funding student-led startups       | 2023 – 2025 |
| <b>Bronze Medal</b> , Bay Area Science & Engineering Fair — atmospheric water generator prototype | 2025        |
